Suryaansh Sharma

suryaansh958@gmail.com — LinkedIn — GitHub — Portfolio

Summary

Computer Science student focused on **AI application development, LLM integrations, backend systems, and intelligent automation**. Hands-on experience building custom agentic architectures, AI-powered applications, RAG systems, REST APIs, and real-time AI pipelines using **Python, FastAPI, LLM APIs, and modern AI frameworks**.

Education

B.Tech in Computer Science Jul 2023 – Present
JK Lakshmipat University, Jaipur

Technical Skills

Languages	Python, SQL, C++, JavaScript
AI / GenAI	LLMs, Generative AI, RAG, Agentic AI, Tool Calling, Prompt Engineering
Backend / APIs	FastAPI, Flask, REST APIs, API Integration, Backend Development
AI Frameworks	PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers
Automation	n8n, AI Workflows, Workflow Orchestration
Computer Vision	OpenCV, YOLO, Face Recognition, Object Detection
Databases	MySQL, PostgreSQL, MongoDB, Neo4j
Tools	Git, Docker, Linux, Raspberry Pi, Arduino

Experience

- **AI Intern — Racketail Solutions Pvt. Ltd.** May 2025 – Jul 2025
- **Robotics Intern — UV Patel College of Engineering** Jun 2025
- **Teaching Assistant (Python) — JK Lakshmipat University** Aug 2024 – Dec 2024
- **Freelance Web Developer — Self-employed** Ongoing

Projects

- **Agentic AI Framework — Custom Multi-Agent Architecture**
  - Designed a custom multi-agent system with **Planner, Orchestrator, shared State Manager, specialized agents, and dynamic tool registry**.
  - Integrated LLMs with deterministic Python tools for database querying, analytics, visualization, and multi-step task execution.
  - Built modular orchestration for task decomposition, tool selection, execution, state management, and result synthesis.

  GitHub
- **AI OS — Local AI Application & Automation System**
  - Designed a custom AI architecture connecting LLM reasoning with **filesystem, terminal, application, memory, RAG, Git, and calendar tools**.
  - Developed tool-based execution and persistent context for natural-language control of multi-step desktop workflows.
  - Implemented a **human-in-the-loop approval layer** to control sensitive or destructive operations.

  GitHub
- **GUNI Robot — AI Humanoid System**
  - Built an AI-driven robot integrating **LLMs, Computer Vision, speech processing, emotion analysis, and real-time interaction**.
  - Developed pipeline: **Speech-to-Text → Emotion Detection → LLM → Text-to-Speech**.
  - Integrated Raspberry Pi, Arduino, Python/FastAPI, and backend components to connect AI services with physical hardware.

  GitHub
- **Fitness Ring AI — Emotion & Stress Recognition**
  - Developed physiological-signal processing and ML pipelines using **WESAD, Empatica4, and Oura Ring** datasets.
  - Processed HR, BVP/PPG, HRV, skin temperature, SpO2, and accelerometer signals using NeuroKit2, pyHRV, and custom processing.
  - Built stress/emotion classification workflows using **LightGBM and tree-based models** with physiological and lifestyle features.
